Assembly Instructions
scanCONTROL 2600/2650/2900/2950

1. **Warnings**
Connect the power supply and the display-/output device according to the safety regulations for electrical equipment. The supply voltage must not exceed the specified limits.

> Risk of injury, damage to or destruction of the sensor

Avoid shocks and impacts to the sensor. Avoid constant exposure of the sensor to dust and splashes of water. Avoid exposure of sensor to aggressive materials (detergents, cooling emulsions).

> Damage to or destruction of the sensor

Read the detailed operation instructions before operating the sensor. These instructions are available online at [www.micro-epsilon.com](http://www.micro-epsilon.com).

2. **Notes on CE Marking**
The following apply to the scanCONTROL 26xx/29xx:
- EU Directive 2014/30/EU
- EU Directive 2011/65/EU

The sensor is designed for use in industrial environments. The sensor satisfies the requirements if the guidelines in the operation instructions are maintained in installation and operation.

3. **Proper Environment**
- Protection class: IP65
- Temperature range:
  - Operation: 0 ... +45 °C (+32 ... +113 °F), for free circulation of air
  - Storage: -20 ... +70 °C (-4 ... +158 °F)
- Humidity: 5 - 95 % (non-condensing)
4. **Laser Safety**

The scanCONTROL 26xx/29xx sensors operate with a semiconductor laser with a wavelength of 658 nm (visible/red). Operation of the laser is indicated visually by the LED on the sensor, see operating instructions, Chap. 3.3.

When operating the scanCONTROL 29xx sensors, the relevant regulations according to IEC 60825, Part 1 of 05/2014 and the applicable accident prevention regulations must be followed.

The laser warning labels for Germany have already been attached. For other non-speaking countries, an IEC standard label is included in delivery and the versions valid for the user's country must be attached before the device is put into operation for the first time.

- If both warning labels are covered over when the unit is installed, the user must ensure that supplementary labels are applied.

**Laser Class 2M**

The sensors fall within laser class 2M. The laser is operated on a pulsed mode, the maximum optical power is \( \leq 8 \) mW.

---

**CAUTION** Laser radiation. Close your eyes or immediately turn away if the laser beam hits the eye. Irritation or injury of the eyes possible.

Attach the following warning labels to the cover (front and rear side) of the sensor housing:

![Laser warning sign and laser label, LLT26xx, LLT29xx](image1)

Mark the laser area recognizable and everlasting.

**Laser Class 3B**

The sensors fall within laser class 3B. The laser is operated on a pulsed mode, the maximum power is \( \leq 50 \) mW.

---

**CAUTION** Laser radiation. Wear suitable protective glasses. Injury of the eyes and the skin are possible.

Attach the following warning labels to the cover (front and rear side) of the sensor housing:

![Laser warning sign and laser label, LLT26xx, LLT29xx](image2)

In addition, the following information label must be attached to the laser output on the sensor housing:

![Laser aperture](image3)
Only for USA

Class 3B laser sensors are notifiable and a laser protection officer is required.

Mark the laser area recognizable and everlasting. During operation the laser area has to be restricted and marked.

- Sensors of laser class 3B require an external key switch to switch off the laser, see operating instructions Chap. 5.2.6.

![Sensor with laser labels](image)

**Beam Attenuator**

Laser products certified as Class 3B products (EN 60825-1) require a beam attenuator, see Fig. 4, see Fig. 5, other than the key-operated control. The beam attenuator prevents access to all laser and collateral radiation.

![Sensor with closed beam attenuator](image)

![Sensor with open beam attenuator (measuring)](image)

To open or close the aperture please follow the steps below:

- Loosen the knurled screw.
- Change the attenuator position and tighten the knurled screw.

The laser aperture must be open during measurement, see operating instructions Chap. 5.2.6 (laser switch-off).
5. Connections, LED Indication

1 Ethernet port
2 Multifunction port (Power supply, I/O)

### Multifunction Port

IN1, IN2, IN3, RS422: inputs galvanically isolated from GND and laser on/off

12-pin. screw connector, view on solder side (cable)
RS422, Synchronization

The RS422 connection (pins 11 and 12 of the multifunction port) can be used in either of the following configurations:
- RS422 (half-duplex): Load user modes and sensor control
- Synchronization/triggering: Synchronization or triggering using switching signals

Trigger, Encoder, Mode Switching

The switching inputs of the multifunction port can either be used for encoder input, trigger input or for load previously stored user modes.

The signal levels are switchable for all switching inputs between LLL (low voltage, TTL logic) and HLL (high voltage, HTL logic):
- LLL level: Low 0 V … 0.8 V, high 2.4 V … 5 V, internal pull-up 10 kΩ connected to 5 V
- HLL level: Low 0 V … 3 V, high 11 V … 24 V (permitted to 30 V), internal pull-up 10 kΩ connected to 24 V
- Pulse duration: ≥ 5 µs

External Laser Switch-off, Optional

The external laser switch-off is implemented as a hardware solution and has a top priority. The laser can be switched off, in addition, also by software.

This function is offered by sensors with the /SI option.

Use a serial key switch in the control circuit to switch off the laser.

With standard sensors, connecting the supply voltage activates the laser light source in the sensor.

Wiring details are available in the operating instructions, Chap. 5.2.6.

- View on pin side of male cable connector
- View on solder side (cable) of screw connector (A-coded)

- The sensor supports an automatic, sensor-adapted IP address in the link-local-net (169.254.x.x). No collision check is performed. This is also the standard setting.
- The sensor supports DHCP. This setting is activated by default and has priority over the retrieval in the link-local net.
- The sensor scanCONTROL 26xx/29xx supports Power over Ethernet.

**NOTICE**

If the sensor is connected to a POE-capable network adapter/switch and you also use the power supply of the multifunction port, these two power supplies must be galvanically isolated.

> Damage to the sensor and/or Ethernet card!

- A fixed IP address can be assigned.

Use the sensorTOOL program to make specify the sensor settings described above.

The program is available online at https://www.micro-epsilon.de/service/download/software.
### LED Indication

<table>
<thead>
<tr>
<th>LED Laser on</th>
<th>LED state</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green:</td>
<td>Measurement active</td>
</tr>
<tr>
<td>Laser on</td>
<td>Data transmitting running</td>
</tr>
<tr>
<td>Grün, flashes long</td>
<td>Running</td>
</tr>
<tr>
<td>Green, flashes short</td>
<td>Controller accesses</td>
</tr>
<tr>
<td>Red, flashes</td>
<td>Error code</td>
</tr>
</tbody>
</table>

The state LED indicates different error states by flashing. If no flashing occurs for several seconds, no error has occurred. For a detailed description of the error codes, please refer to the operating instructions, Chap. 12.

### 6. System Requirements

#### scanCONTROL Configuration Tools

The following minimum system requirements are necessary:

- Windows 7, Windows 8 or 8.1, Windows 10 (each 32 bit and 64 bit)
- 1-GHz or faster (32 bit and 64 bit) processor / 1 GB RAM
- Screen resolution: 1024x768

#### scanCONTROL 3D-View

The following minimum system requirements are necessary:

- Windows 8 or 8.1 (64 bit), Windows 10 (64 bit)
- 1-GHz or faster (64 bit) processor
- 1 GB RAM
- Screen resolution: 1024x768
- Graphic card / GPU with OpenGL 3.1 or higher
7. **Quickstart: Initial Operation, Software**

Mount the sensor according to the installation instructions.

Install the software.

You will find the software online on the product website of the sensor or in the download area: https://www.micro-epsilon.com/2D_3D/laser-scanner/Software/downloads/.

Follow the dialog instructions through the installation process:

A. Read the installation help

B. Install the software

C. Additional information in the online documentation

Connect the sensor to the PC using the optionally available SCR3000A-x Ethernet cable.

Connect the shield of the power supply cable to the PE grounding conductor of the main power supply. Close connection plugs you do not require with the included protective caps. Turn on the power supply (24 VDC).

Please wait until the scanCONTROL measuring system is recognized by the PC. This may take a few seconds.

Now you can operate the scanCONTROL measuring system with the scanCONTROL software packages.

Operating the sensors via Ethernet may require the IP settings of the PC/sensor or the firewall settings to be adjusted, see Chap. 5.2.5 of the operating instructions.

The connectors for Ethernet and the multifunction port include a screw connector.

Loosen the screws connection before you remove the connector from the socket.

Only connect the sensor to the peripheral equipment, if it is disconnected from the power supply, i.e. only when the operating voltage is switched off. The sensor needs a warm-up time of typically 20 minutes for high precision measurements.
8. First Profile

Now start the scanCONTROL Configuration Tools software. Click on Display Profiles in the main window.

If the software shows the error message No scanCONTROL found in the status line, please check the Ethernet connection between scanCONTROL and PC.

On the left side you can adjust the settings for your measurement task. The right side shows the profile data and further information about the measurement.

9. How to Access Profile Data

Profile data of scanCONTROL can be accessed via:
- GigEVision and GenICam for digital cameras via Ethernet
- SDK for fast application integration (C, C++, C# and others)

Please refer to the respective SDK documentation for further information on accessing the profile data.
10. Unpacking, Included in Delivery

- 1 scanCONTROL 26xx/29xx sensor with integrated controller
- 1 PCR3000-5 multifunction cable, length 5 m; for power supply, trigger and RS422; screw connector and free cable ends
- Calibration protocol / assembly instructions
- 2 Protective caps

11. Additional Information

Please refer to
- the enclosed online documentation,
- the „Status- and Error Messages“ and „Notes“ sections in the scanCONTROL Configuration Tools operating instructions.

You will find details about the individual programs in the respective operating instructions or in the operating instructions of this sensor, Chap. 6.2.

You will find the operating instructions online at www.micro-epsilon.en.
