1. **Warnings**

Connect the power supply and the display-/output device according to the safety regulations for electrical equipment. The supply voltage must not exceed the specified limits.

> Risk of injury, damage to or destruction of the sensor

Avoid shocks and impacts to the sensor. Avoid constant exposure of the sensor to dust and splashes of water. Avoid exposure of sensor to aggressive materials (detergents, cooling emulsions).

> Damage to or destruction of the sensor

You can find more information about the sensor in the operating instructions. They are online at:

2. **Notes on Product Marking**

The product meets the requirements of CE and UKCA. All specifications and safety instructions described in the operating instructions must be observed.

3. **Proper Environment**

- Protection class: IP67
- Temperature range:
  - Operation: 0 ... +45 °C (+32 ... +113 °F), for free circulation of air
  - Storage: -20 ... +70 °C (-4 ... +158 °F)
- Humidity: 5 ... 95 % (non-condensing)
4. Laser Safety

The scanCONTROL 30xx sensors operate with a semiconductor laser with a wavelength of 658 nm resp. 660 nm (visible/red). Operation of the laser is indicated visually by the LED on the sensor, see operating instructions Chap. 3. When operating the scanCONTROL 30xx sensors, the relevant regulations according to IEC 60825, Part 1 and the applicable accident prevention regulations must be followed. The laser warning labels for Germany have already been attached. For other non German speaking countries, an IEC standard label is included in delivery and the versions valid for the user’s country must be attached before the device is put into operation for the first time.

If both warning labels are covered over when the unit is installed, the user must ensure that supplementary labels are applied.

Laser Class 2M

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>Laser radiation. Irritation or injury of the eyes possible. Close your eyes or immediately turn away if the laser beam hits the eye.</th>
</tr>
</thead>
</table>

The sensors fall within laser class 2M (IIM). The laser is operated on a pulsed mode, the maximum optical power is $\leq 10 \text{ mW}$, $\leq 12 \text{ mW}$ resp. $\leq 26 \text{ mW}$. Attach the following warning labels to the cover of the sensor housing.

![Warning Labels](image1)

![Warning Labels](image2)

![Warning Labels](image3)

Only for USA

Mark the laser area recognizable and everlasting.
Laser Class 3R

**CAUTION**
Laser radiation. Irritation or injury of the eyes possible. Use suitable protective equipment and close your eyes or immediately turn away if the laser beam hits the eye.

The sensors with the /3R option fall within laser class 3R. The laser is operated on a pulsed mode, the maximum optical power is ≤ 30 mW, ≤ 50 mW resp. ≤ 100 mW. Attach the following warning labels to the cover of the sensor housing.

---

In1, In2, In3, In4, RS422: inputs galvanically isolated from GND and laser on/off

12-pin screw connector, view on solder side (cable)
RS422, Synchronization

The RS422 connection (pins 11 and 12 of the multifunction port) can be used in either of the following configurations:

- **RS422 (half-duplex):** Load user modes, sensor control and transmit measurement results (Modbus RTU or ASCII format).
- **Synchronization/triggering:** Synchronization or triggering using switching signals.

Trigger, Encoder, Mode Switching

The switching inputs of the multifunction port can either be used for encoder input, trigger input or for load previously stored user modes.

The signal levels are switchable for all switching inputs between LLL (TTL logic) and HLL (HTL logic):

- **LLL level:** Low 0 V … 0.8 V, high 2.4 V … 5 V, internal pull-up/down switchable resistor 10 kΩ
- **HLL level:** Low 0 V … 3 V, high 11 V … 24 V (permitted to 30 V), internal pull-up/down switchable resistor 10 kΩ
- **Pulse duration:** ≥ 5 µs

External Laser Switch-off, Optional

Externally switching off the laser is implemented as a hardware solution and is a top priority. The laser can also be switched off by software.

This function is offered by sensors with the /SI option.

➤ Use a serial key switch in the control circuit to switch off the laser.

With standard sensors, connecting the supply voltage activates the laser light source in the sensor.

Wiring details are available in the operating instructions, Chap. 5.

- View on pin side of male cable connector
- View on solder side (cable) of screw connector (A-coded)

- The sensor supports an automatic, sensor-specific IP address in the link-local net (169.254.x.x). No collision detection is implemented. This is also the default setting.
- The sensor supports DHCP. This setting is activated by default and has priority over search the link-local net.
- The sensor scanCONTROL 30xx supports Power over Ethernet.

**NOTICE**

If the sensor is connected to a POE-capable network adapter/switch and you also use the power supply of the multifunction port, these two power supplies must be galvanically isolated.

> Damage to the sensor and/or Ethernet card!

- A fixed IP address can be assigned.

Use the sensorTOOL program to make specify the sensor settings described above.

The program is available online at [https://www.micro-epsilon.com/download/software/sensorTOOL.exe](https://www.micro-epsilon.com/download/software/sensorTOOL.exe).

### LED Displays

</tr>
</tbody>
</table>

The Data LED flashes green, long during active transmission and short for controller accesses.
6. **Transmitting Measurement Results**

scanCONTROL 30xx offers the following options for transmitting measurement results:
- Ethernet interface
  - Modbus TCP protocol
  - UDP protocol
  - Analog output of measurement values (via optional 2D/3D Output Unit)
  - Digital output of switching signals (via optional 2D/3D Output Unit)
  - Fieldbus connection PROFINET, EtherNet/IP, EtherCAT (via optional 2D/3D Gateway)
- RS422 interface
  - Modbus RTU protocol
  - Measurement value transmission in ASCII format

7. **System Requirements**

**scanCONTROL Configuration Tools**

The following minimum system requirements are necessary:
- Windows 8 or 8.1, Windows 10, Windows 11 (64 Bit each)
- 1-GHz processor (64 bit)
- 1 GB RAM
- Screen resolution: 1024 x 768

**scanCONTROL 3D-View**

The following minimum system requirements are necessary:
- Windows 8 or 8.1, Windows 10, Windows 11 (64 Bit each)
- 1-GHz or faster (64 bit) processor or higher
- 1 GB RAM
- Screen resolution: 1024 x 768
- Graphics card / GPU with OpenGL 3.1 or higher
8. Quick Start, Initial Operation, Software

Mount the sensor according to the installation instructions.

Install the software.

You will find the software online on the product website of the sensor or in the download area:

Follow the dialog through the installation process:
A. Reading the installation help
B. Installing the software
C. Additional information in the online documentation

Connect the sensor to the PC using the optionally available SCR3000A-x Ethernet cable.

Connect the shield of the power supply cable to the PE grounding conductor of the main power supply. Close unused connection plugs with the included protective caps. Turn on the power supply (24 VDC).

Please wait until the scanCONTROL measuring system is recognized by the PC. This may take a few seconds.

Now you can operate the scanCONTROL measuring system with the scanCONTROL software packages.

Operating a scanCONTROL sensor via Ethernet may require the IP settings of the PC/sensor or the firewall settings to be adjusted, see Chap. 5 of the operating instructions.

The connectors for Ethernet and the multifunction port include a screw connector. Loosen the screws connection before you remove the connector from the socket.

Only connect the sensor to the peripheral equipment, if it is disconnected from the power supply, i.e. only when the operating voltage is switched off. The sensor needs a warm-up time of typically 20 minutes for high precision measurements.
9. First Profile

Now start the scanCONTROL Configuration Tools software. Click on Display Profiles in the main window.

If the software shows the error message No scanCONTROL found in the status line, please check the Ethernet connection between scanCONTROL and the PC.

On the left side you can adjust the settings for your measurement task, the right side shows the profile data and information about the measurement.

10. How to Access Profile Data

Profile data of scanCONTROL can be accessed via:
- GigEVision and GenICam for digital cameras via Ethernet interface
- SDK for fast application integration (C, C++, C# and others)

Please refer to the respective SDK documentation for further information on accessing the profile data.
11. **2D/3D Gateway**

2D/3D Gateway allows for scanCONTROL SMART sensors to be integrated into various fieldbus systems:
- PROFINET
- EtherNet/IP
- EtherCAT

All measurement results obtained from the profile evaluation carried out of a scanCONTROL SMART sensor can be transmitted to a PLC via one of these fieldbus systems. Furthermore, all scanCONTROL sensor settings can be set via the 2D/3D Gateway (e. g. Laser on/off or switch User Mode).

2D/3D Gateway can connect up to four scanCONTROL SMART sensors to the fieldbus. Measurement values are transmitted at up to 500 Hz. Please refer to connection instructions mav--2D3D-Gateway-II-scanCONTROL-XXXX.pdf for more details.

Connecting the Supply Voltage

Digital output terminals need a field supply of 5 VDC or 24 VDC depending on the module type.

After mounting the modules, install the required wiring.

- Connect the System supply (out) contacts of the OU-Filter module to the System supply (in) contacts of the OU-fieldbus coupler (0 V and 24 V).
- Connect the system supply (in) of the OU-Filter module to the power supply (0 V and 24 V).
- Connect the field supply (in) of the OU-Filter module to the power supply (0 V and 24 V or 0 V and 5 V).

The system supply and field supply should be separated to ensure bus operation and electrical isolation if an actor short-circuits.
13. **Unpacking, Included in Delivery**
- 1 scanCONTROL 30xx sensor with integrated controller
- 1 PCR3000-5 multifunction cable, length 5 m; for power supply, trigger and RS422; screw connector and free cable ends
- Calibration final inspection / assembly instructions
- 2 Protective caps
- Centering elements (MB25-200: 2 pcs. / MB430/600: 4 pcs.)
- IEC warning labels

14. **Additional Information**

Please refer to
- the enclosed online documentation
- the “Status and Error Messages” and “Notes” sections in the scanCONTROL Configuration Tools operating instructions.

You will find details about the individual programs in the respective operating instructions or in the operating instructions of this sensor, Chap. 6. You will find the operating instructions online at [www.micro-epsilon.com](http://www.micro-epsilon.com).
