1. Safety
The handling of the system assumes knowledge of the instruction manual.

1.1 Symbols Used
The following symbols are used in the instruction manual.

- **CAUTION**: Indicates a hazardous situation which, if not avoided, may result in minor or moderate injuries.

- **NOTICE**: Indicates a situation which, if not avoided, may lead to property damage.

- **Measure**: Indicates a hardware or a button/menu in the software.

1.2 Warnings
Connect the power supply in accordance with the safety regulations for electrical equipment.

> Danger of injury
> Damage to or destruction of the light source

Do not look directly into the light source
> Danger of injury, damage to the eyes or skin

Let the light source cool off for a few minutes before changing the lamp.
> Risk of burns by the still hot lamp

Pay attention to the hot environment when changing the lamp.
> Risk of burns

Keep the light source away from liquids and splashes of water.
> Damage to or destruction of the light source

The power supply must not exceed the specified limits.
> Damage to or destruction of the light source
Safety

The light source may not be operated with opened front panel or removed housing cover.
> Damage to or destruction of the light source

Do not insert foreign objects into the openings of the light source.
> Damage to or destruction of the light source

1.3 Notes on CE Identification
The following applies to the ELTROTEC Endolight FOT Halogen 150 light source:
- EU directive 2004/108/EC
- EU directive 2006/95/EC
- EU directive 2011/65/EU, “RoHS” category 11

Products which carry the CE mark satisfy the requirements of the quoted EU directives and the European standards (EN) listed therein. The EC declaration of conformity is kept available according to EC regulation, article 10 by the authorities responsible at

MICRO-EPSILON Eltrotec GmbH
Manfred-Wörner-Straße 101
73037 Göppingen / Germany

The ELTROTEC Endolight FOT Halogen 150 light source is designed for use in industry and satisfies the requirements of the standards
- EN 61000-6-1: 2007
- EN 61000-6-4: 2007

The system satisfies the requirements if they comply with the regulations described in the instruction manual for installation and operation.
1.4 **Proper Use**
- The ELTROTEC Endolight FOT Halogen 150 light source is designed for use in industrial area with various fiber optics applications (lighting, endoscopy, etc.).
- Light output for up to 13 mm fiber diameter
- The ELTROTEC Endolight FOT Halogen 150 light source is not suitable for medical purposes.
- The system may only be operated within the limits specified in the technical data, see Chap. 2.2.
- Use the ELTROTEC Endolight FOT Halogen 150 light source in such a way that in case of malfunctions or failure personnel or machinery are not endangered.
- Take additional precautions for safety and damage prevention for safety-related applications.

1.5 **Proper Environment**
- Operating temperature: -10 °C to 40 °C \(^1\) (+14 °F to +104 °F \(^1\))
- Storage temperature: -25 °C to 60 °C \(^1\) (-13 °F to +140 °F \(^1\))
- Humidity: 15 to 95 %
- Ambient pressure: Atmospheric pressure
- Electromagnetic compatibility (EMC): EN 61000-6-1: 2007
- Electromagnetic compatibility (EMC): EN 61000-6-4: 2007

1) Built-in fan for lamp cooling
2. **Functional Principle, Technical Data**

2.1 **Short Description**
The ELTROTEC Endolight FOT Halogen 150 light source is regarded as the universal solution when using external light sources in the endoscopy. The high light output and simple operation facilitate optimal inspection results. The light intensity is adjusted steplessly with the controllable light sources by means of a mechanical iris diaphragm without the color temperature of the light source is influenced. Different adapters and glass fiber applications permit various uses.

2.2 **Technical Data**

3. Delivery

3.1 Unpacking
- ELTROTEC Endolight FOT Halogen 150 light source
- Halogen lamp Osram type HLX 64634 15 V / 150 W
- Power supply cable

You will find the suitable fiber optics and fiber-optic lighting units under Optional Accessories, see Chap. A 1

Check the delivery for completeness and shipping damage immediately after unpacking.
In case of damage or missing parts, please contact the manufacturer or supplier immediately.

3.2 Storage
- Storage temperature: -25 °C to 60 °C (-13 °F to +140 °F ')
- Humidity: 15 to 95 %
- Ambient pressure: Atmospheric pressure

*Fig. 3 Control elements front side and rear side*
5. Operation

5.1 Getting Ready for Operation
Check the built-in heat filter for possible break.
> Damage to the iris diaphragm and the connected fiber optics by excessive heat development

Set the iris diaphragm control lever (3), see Chap. 4.2, initially at minimum position (left) to prevent glare.

5.2 Commissioning
The light source is supplied as standard for the connection to 230 VAC operating voltage, see Chap. A 3.

Replug the voltage selector (8) for 110 VAC operating voltage by setting the 115 to the positioning arrow (8), see Chap. 5.3.

The terminals 120 Volt (positioning arrow (2) is on 125, see Chap. 5.3.) and 240 Volt (positioning arrow (2) is on 250, see Chap. 5.3.) are not occupied and cannot be used.
If the voltage selector has this setting, the light source can therefore not be used.

Connect the supplied power supply cable to the power input (9), see Chap. 4.2 and the power supply.

Connect the fiber optic cable to the fiber optic connection (5), see Chap. 4.2.
Some fiber optic cables (e.g. multi-armed gooseneck fiber optic cables) and adapters are fitted with a cam (anti-rotation device), which enters the anti-rotation device keyway (4), see Chap. 4.2, to prevent rotation of the connector.

Press the ON/OFF switch (7), see Chap. 4.2.
The control lamp lights up. The light source is ready to operate.

Check Always after switching on whether the built-in fan runs (noise).
> Destruction of the lamp, the heat protection filter and the iris diaphragm due to excessive heating.

In case of a defective fan, turn the light source off immediately.
Operation

Let the light source cooling down still some minutes after switching off before storing in any closed room or in the original packaging.

> Risk of fire by heat

The lamp power can be adjusted by economy switch (6), see Chap. 4.2. If there is sufficient light the switch should be on level Ⅱ (intensity 92 %). Thus, a longer lamp lifetime can be achieved.

The light intensity can be adjusted steplessly with the iris diaphragm control lever (3), see Chap. 4.2.

The light adjustment is made by a mechanical iris diaphragm (without interference of the color temperature).
5.3 **Adjust the Input Voltage 110 / 230 V**

Unplug the power supply cable.

The factory setting of the voltage input is set on 230 VAC operating voltage. The positioning arrow points to 230 (2), see Fig. 4.

To adjust the input voltage to 110 VAC, raise the voltage selector element at the designated cut, see Fig. 4, see Fig. 5, using a screw driver and pull it out.

![Fig. 4 Detail rear side of light source](image1)

![Fig. 5 Raise the voltage selector element](image2)

<p>| | |</p>
<table>
<thead>
<tr>

<td>2</td>
<td>Positioning arrow</td>
</tr>
<tr>
<td>3</td>
<td>Cut to raise the voltage selector element</td>
</tr>
<tr>
<td>4</td>
<td>Power supply cable connection</td>
</tr>
</tbody>
</table>
Operation

- Turn the element until the number 115 is on arrow position.
- Insert the voltage selector element again and press on it.
- Plug in again the power supply cable.

5.4  **Fuse Replacement**

- Unplug the power supply cable from the socket and from the light source.
- The fuse (5 x 20 mm, 2 AT) is in the voltage selector element (8), see Chap. 4.2.
- Raise the voltage selector element, see Fig. 4, at the designated cut using a screwdriver (1) and pull it out (2).

![Fig. 6 Fuse replacement](image)

- Remove the defective fuse (3) and insert a new fuse (2 AT).
- Please use only the fuses recommended in the appendix under optional accessories (2 AT), see Chap. A 1.
- Insert the voltage selector element again and press on it.
- Pay attention onto the correct position of the operating voltage.

- Plug in again the power supply cable.
5.5 Changing the Lamp

Let the light source cool off for a few minutes before changing the lamp.
>
Risk of burns by the still hot lamp

Do not touch the inside of the lamp (mirror, lamp bulb).
>
Reducing the intensity and lifetime of the lamp by finger prints and dust

Switch off the ON/OFF switch, see Fig. 3 and disconnect the power supply cable from the wall socket.

Remove the screw, see Fig. 3, on the front side of the light source (1), whereupon the right front door with the lamp unit can be folded down (2).

Loosen the lamp out of the holder carefully (3), lift the spring clip slightly (4) and pull the lamp from the lamp socket (5).
4 Lift the spring clip

5 Lamp socket

- Insert the new lamp into the lamp socket and position them into the holder.
- Make sure that the lamp coding is placed again in the designated cut.

Other settings are not required, as the holding system provides an optimum adjustment with a footprint up to 13 mm (maximum applicable fiber diameter).
- Close the front door and mount it again with the screw, see Fig. 3.
- Plug in the power supply cable.
6. Instructions for Operation

6.1 General
Except the descriptive maintenance work (change of lamp, see Chap. 5.5, fuse replacement, see Chap. 5.4, voltage settings, see Chap. 5.3) no repairs or changes at the light source may be made, see Chap. 7., see Chap. 8.

6.2 Cleaning
6.2.1 Housing and Power Supply

> Turn off the ELTROTEC Endolight FOT Halogen 150 light source and disconnect the power supply cable from the wall socket and from the rear side of the device.

> Wipe the exterior surfaces using a damp cloth with mild soapy water.

> Wipe the power supply cable using a damp cloth with mild soapy water.

6.2.2 Quartz Glass of Light Source

> Remove any fingerprints using a cotton swab or isopropyl alcohol (rubbing alcohol).

NOTICE
Do not immerse the device in water. Do not connect the device/power supply cable if it is damp. The light source may get damaged or destroyed.
7. Warranty
All components of the device have been checked and tested for perfect function in the factory. In the unlikely event that errors should occur despite our thorough quality control, this should be reported immediately to MICRO-EPSILON Eltrotec.
The warranty period lasts 12 months following the day of shipment. Defective parts, except wear parts, will be repaired or replaced free of charge within this period if you return the device free of cost to MICRO-EPSILON Eltrotec. This warranty does not apply to damage resulting from abuse of the equipment and devices, from forceful handling or installation of the devices or from repair or modifications performed by third parties.
No other claims, except as warranted, are accepted. The terms of the purchasing contract apply in full. MICRO-EPSILON Eltrotec will specifically not be responsible for eventual consequential damages. MICRO-EPSILON Eltrotec always strives to supply the customers with the finest and most advanced equipment. Development and refinement is therefore performed continuously and the right to design changes without prior notice is accordingly reserved. For translations in other languages, the data and statements in the German language operation manual are to be taken as authoritative.

8. Service, Repair
In the event of a defect on the ELTROTEC Endolight FOT Halogen 150 light source or on power supply cable please send us the effected parts for repair or exchange.
In the case of faults the cause of which is not clearly identifiable, the whole measuring system must be sent back to:
MICRO-EPSILON Eltrotec GmbH
Manfred-Wörner-Straße 101
73037 Göppingen / Germany
Tel. +49 (0) 7161/ 98872-300
Fax +49 (0) 7161 / 98872-303
eltrotec@micro-epsilon.de
www.micro-epsilon.com

9. Decommissioning, Disposal
- Disconnect the power supply cable from the light source.
The light source is produced according to the directive 2011/65/EU, „RoHS“.
- Do the disposal according to the legal regulations (see directive 2002/96/EC).
