confocalDT // Confocal chromatic measuring system
The universal confocalDT IFC2451 controllers are used for various industrial measurement tasks. Due to their excellent signal-to-noise ratio, these controllers achieve measuring rates of 10 kHz with white light LEDs.

The active exposure regulation feature in the CCD line enables accurate, fast surface compensation on changing surfaces during dynamic measurement processes.

Due to a user-friendly web interface, no additional software is necessary to configure the controller and the sensors. Data output is via Ethernet, EtherCAT, RS422 or analog output.

The confocalDT controllers are used for complex distance and thickness measurements and can be combined with any IFS sensor. Furthermore, up to 6 peaks are provided which allows for the thickness of transparent, multi-layer objects to be measured. Optical signals are transferred between sensor and controller via optical fibers.

System design

The confocalDT system consists of:
- Sensor IFS240x
- Controller IFC24xx
- Fiber optic cable C24xx
Customer-specific modifications
Application examples are often found where the standard versions of the sensors and the controllers are performing at their limits. To facilitate such special tasks, it is possible to customize the sensor design and to adjust the controller accordingly. Common requests for modifications include changes in design, mounting options, customized cable lengths and modified measuring ranges.

Possible modifications
- Sensors with connector
- Cable length
- Vacuum suitability up to UHV
- Specific lengths
- Customer-specific mounting options
- Optical filter for ambient light compensation
- Housing material
- Measuring range / Offset distance
