<sup>1)</sup> Average from 512 values at 1 kHz, near to the midrange onto optical flat.
<sup>2)</sup> All data at constant ambient temperature (25±1 °C) against optical flat; specifications can change when measuring different materials.
<sup>3)</sup> Maximum sensor tilt angle that produces a usable signal on reflecting surfaces. The accuracy decreases when approaching the limit values.
<sup>4)</sup> Start of measuring range measured from sensor axis.

Customer-specific modifications
Application examples are often found where the standard versions of the sensors and the controller are performing at their limits. To facilitate such special tasks it is possible to customize the sensor design and to adjust the controller accordingly. Common requests for modifications include changes in design, mounting options, customized cable lengths and modified measuring ranges.

Possible modifications
- Sensors with connector
- Cable length
- Vacuum suitability up to UHV
- Specific lengths
- Customer-specific mounting options
- Optical filter for ambient light compensation
- Housing material
- Measuring range / Offset distance
