eddyNCDT // Inductive sensors based on eddy currents

High-performance inductive measuring system

eddyNCDT 3060

-  Wide range of applications with more than 400 sensor models
-  High temperature stability
-  High resolution & linearity
-  Frequency response 20 kHz (-3dB)
-  Measuring rate 200 kSa/s
-  Sensors for ferromagnetic and non-ferromagnetic targets
-  Analog output (U/I)
Digital output
-  Intuitive configuration via web interface

High performance for the industry

The eddyNCDT 3060 is a powerful, inductive sensor system based on eddy currents for fast, high precision displacement measurements. The system comprises a compact controller, a sensor and an integrated cable and is factory-calibrated either for ferromagnetic or non-ferromagnetic materials.

Integration into plant and machinery

As sensor and controller are temperature-compensated, a high measurement accuracy can be achieved even in fluctuating temperatures. The sensors are designed for ambient temperatures up to a maximum of +200 °C and an ambient pressure up to 20 bar. The compact controller design as well as the sensor robustness make the measuring system ideal for integration into plant and machinery.

New benchmark in controller technology

The industrial-grade M12 Ethernet interface offers a modern fieldbus connection. Configurable analog outputs enable to output the measured values as voltage or current. For operating several systems, a new frequency separation is provided, which enables to operate several sensors next to one another without requiring any synchronization.

Features	Controller type	
	DT3060	DT3061
Active temperature compensation for sensor and controller	✓	✓
Frequency separation (LF & HF)	✓	✓
Ethernet interface	✓	✓
Intuitive web interface	✓	✓
Multipoint calibration regardless of the distance (up to 3-point calibration)	✓	✓
Scalable measuring range via analog output (teach function)	✓	✓
Scalable analog output	✓	✓

5-point calibration	-	✓
Storage of multiple characteristic curves	-	✓

When connecting a PC via the Ethernet interface, a modern web interface can be accessed without any further installation and enables the parameterization of sensor and controller. The DT3061 controller provides enhanced features such as 5-point calibration, setting of switching and temperature outputs, as well as storage of multiple characteristic curves.

ES-Ux-T design:

Sensors without thread

The ES-Ux-T design are sensors without thread.

These offer additional advantages for installation and temperature stability.

- Thanks to clamp mounting, the cable is not subjected to torsional stress, which prevents damage.
- The sensor has a defined clamping point, which minimizes thermal expansion in the measuring direction and achieves high temperature stability.
