**optoNCDT** // Laser displacement sensors (triangulation)

-  **Eight models with measuring ranges from 2 mm to 300 mm**
-  **Adjustable measuring rate up to 49.14 kHz**
- INTER FACE** **Ethernet / EtherCAT / RS422**  
**Analog output via C-Box**
-  **Advanced Real Time Surface Compensation**
-  **Calibration certificate included**
-  **Measurement of diffuse and specular surfaces**
-  **Thickness measurement of transparent materials**
-  **Configuration via web interface**

The optoNCDT 2300 is the new, high performance version of Micro-Epsilon laser triangulation sensors and offers an adjustable measuring rate of up to 49.14 kHz. The entire electronics is already integrated in a compact sensor housing which is a worldwide unique feature of this sensor class. The new A-RTSC (Advanced Real Time

Surface Compensation) feature is a development of the company's already proven RTSC technology and, with its improved dynamic range, enables a more precise real time surface compensation during the measurement process. The threshold value of the compensation range can be easily configured via the software. Data output is via Ethernet, RS422

or EtherCAT. The C-Box enables analog signal output. All sensor configurations are carried out using a user-friendly web interface. The optoNCDT 2300 is particularly used for high speed applications such as the monitoring of vibrations or measurements on challenging surfaces.

### optoNCDT Demo Tool

The scope of supply includes a software for easy sensor configuration. The settings can be implemented conveniently via a Windows user interface on the PC. The sensor parameters are sent to the sensor via the serial port and can also be saved if required. The software is available as single and multi-channel version. The sensor is connected to the PC via the sensor cable using a USB converter.  
[for any ILD sensor]

### Free download

Download free of charge from [www.micro-epsilon.com/download](http://www.micro-epsilon.com/download): software, driver and well-documented driver DLL for easy sensor integration in existing or customer software.

### Protection housing for harsh environment

To protect the laser sensors in extreme environments, individual protective housings are available for all sensor models. There are three different models:

#### SGH model:

Completely enclosed housing with an integrated front window, where the sensor measures through the window. The water-resistant housing provides protection against solvents and detergents.

#### SGHF model:

With window and compressed-air connection ideal for high ambient temperatures. The integrated air cooling of the housing offers optimum protection for the sensor.

#### SGHF-HT model

This water-cooled protection housing with window and compressed-air connection is designed for measurement tasks in ambient temperatures up to 200 °C.

Suitable for all long-range sensors

**SGHx ILD size S (140 x 140 x 71 mm)**  
for optoNCDT 1750 / 2300 dimensions 97 x 75 mm

**SGHx ILD size M (140 x 180 x 71 mm)**  
for optoNCDT 1750 / 2300 dimensions 150 x 80 mm

### IF2008 - PCI interface card

The IF2008 interface card is designed for installation in PCs and enables the synchronous capture of four digital sensor signals and two encoders. The IF2008E expansion board enables the acquisition of two digital sensor signals, two analog sensor signals and eight I/O signals. The absolutely synchronous data acquisition plays an important role particularly for planarity or thickness measurement tasks. The data are stored in a FIFO memory in order to enable resource-saving processing in the PC in blocks.

#### Special features

- 4x digital signals and 2x encoders with IF2008 basic PCB
- 2x digital signals, 2x analog signals and 8x I/O signals with IF2008E expansion board
- Additional expansion board for a total of 6x digital signals, 2x encoders, 2x analog signals and 8x I/O signals
- FIFO data memory
- Synchronous data acquisition

Interface card IF2008, IF2008E for individual signal processing

### IF2001/USB converter RS422 to USB

The RS422/USB converter transforms digital signals from a laser-optical sensor into a USB data packet. The sensor and the converter are connected via the RS422 interface of the converter. Data output is done via USB interface. The converter loops through further signals and features such as laser on/off, switch signals and function output. The connected sensors and the converter can be programmed through software.

### IF2004/USB: 4-channel converter from RS422 to USB

The RS422/USB converter is used for transforming digital signals from up to four optical sensors into USB data signals. The converter has four trigger inputs and a trigger output for connecting additional converters. Data is output via an USB interface. The connected sensors and the converter can be programmed through software.

#### Special features

- 4x digital signals via RS422
- 4x trigger inputs, 1x trigger output
- Synchronous data acquisition
- Data output via USB

### C-Box/2A controller for conversion and evaluation of up to two sensor signals

C-Box/2A is used for fast D/A conversion of two digital input signals or for evaluating two digital sensor signals. The controller is compatible with the optoNCDT 2300 laser triangulation sensors. Output of the sensor signals is possible via two configurable analog outputs, Ethernet or USB. Handling of the C-Box/2A and of the connected sensors are performed via web interface. Averaging functions, thickness, diameter, step and inclinations can be calculated. The D/A conversion is executed at 16 Bit and max. 70 kHz.
