

More Precision

thicknessGAUGE // Sensor system for inline thickness measurements

Sensor system for precise inline thickness measurements

thicknessGAUGE

Compact complete solution for precise inline thickness measurements up to 50 mm

For many types of surfaces / materials due to different sensor technologies

Traversing sensors on linear axis

Fully automatic calibration

24 V supply for the entire system

Integrated software

Thickness measurement with high precision

thicknessGAUGE sensor systems are used for precise thickness measurements of strip materials, plates and sheets up to 50 mm. Several models with different sensor types, measuring ranges and measuring widths enable inline thickness measurements of different materials and surfaces based on an unmatched price/performance ratio.

This fully assembled system comprises a stable frame on which two optical distance sensors are fixed, that detect the thickness of the measuring object according to the difference principle. The sensors are perfectly aligned to each other and calibrated during the assembly. Furthermore, thickness calibration at the factory ensures high precision.

A linear axis moves the sensor system from the parking position to the measuring position where a measurement standard for fully automatic calibration is placed.

Operating principle of thickness measurement

The principle of dimensional, geometric thickness measurement includes one optical distance sensor on each side of the material. The distance (=working distance) between the two sensors is determined in a calibration process. The basis of the calibration is a DAkkS-certified measurement standard, to the thickness of which the sum of the distance values is added to determine the operating range.

Compact complete system for easy integration

These compact systems are comprised of an integrated linear unit including motor control, a compact bus terminal box, an automatic calibration unit as well as a multi-touch PC with pre-installed software. The entire system is powered via a 24 V source.

Examples of customized modifications:

- Selectable cable lengths
- Customer-specific axis length
- Encoder
- Interface for fieldbus connection
- Digital inputs/outputs

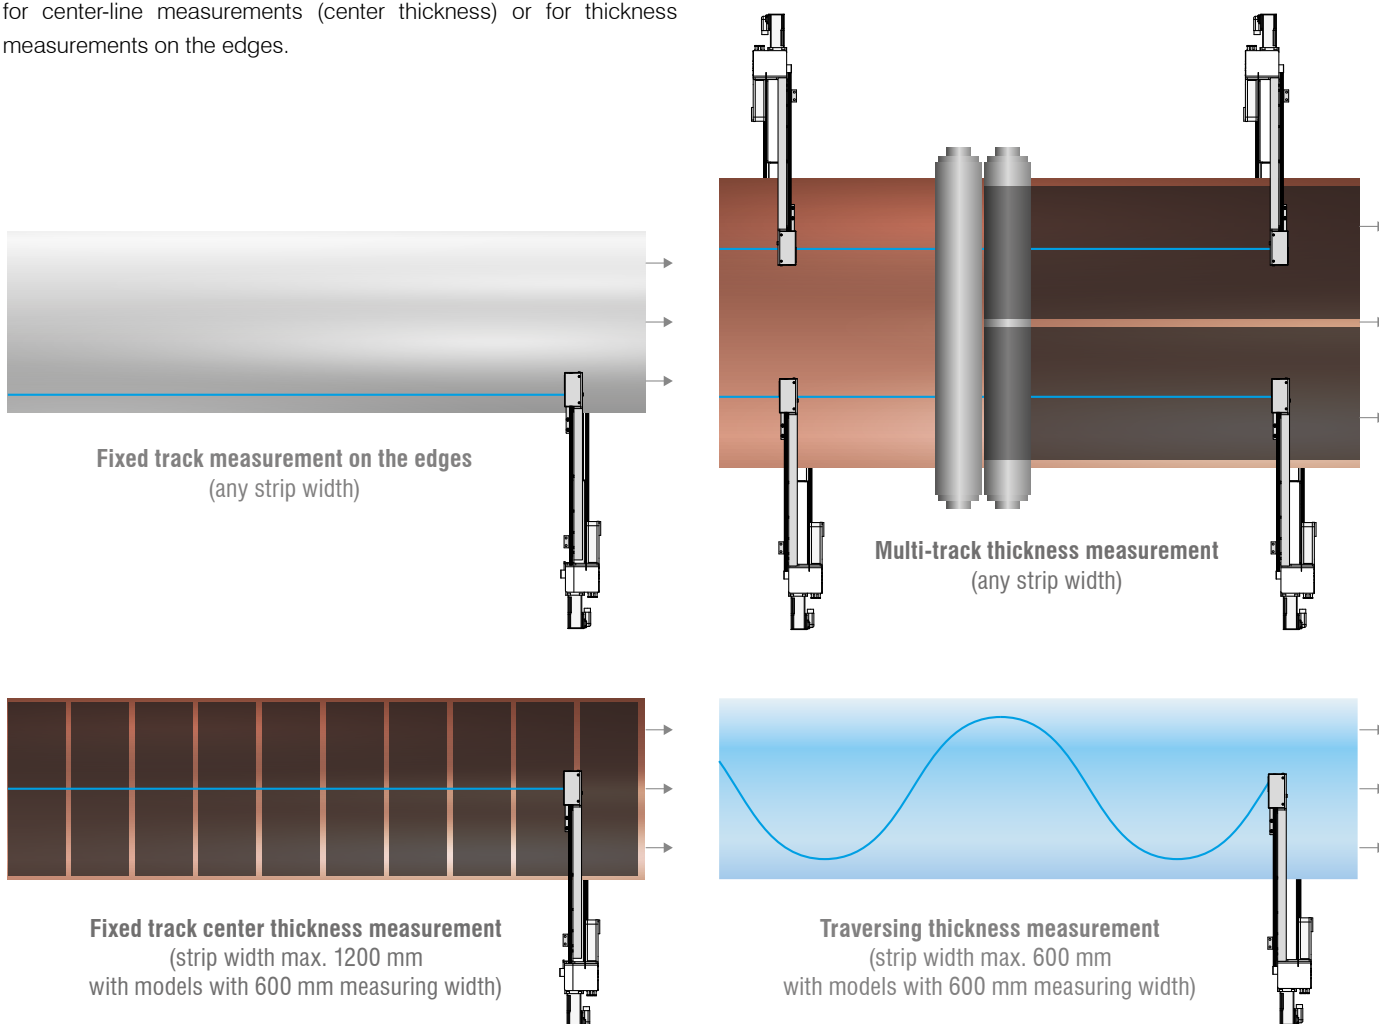

Fully automatic calibration enables reliable measurements (here: thicknessGAUGE C.LP)

Automatic calibration and temperature compensation

To compensate for effects of fluctuating temperatures, the thicknessGAUGE systems are equipped with an in-situ calibration, which is carried out in the parking position. Calibration is performed automatically and at freely selectable intervals. In addition to temperature compensation, in-situ calibration enables proper functioning of the system.

The new class for inline thickness measurements

thicknessGAUGE sensor systems are used for precise thickness measurement in numerous strip materials, plates and sheets. A linear unit with electromechanical drive enables thickness measurements in traversing mode. Alternatively, fixed track measurements are possible for center-line measurements (center thickness) or for thickness measurements on the edges.

100% quality control during production

The thicknessGAUGE sensor systems are designed in such a way that they can be used as both initial equipment and for retrofitting of existing facilities. Based on high precision and equipped with intelligent sensor technology, these systems are used in various industries.

Metal production

Thickness measurement of metal film, metal strips and metal plates

Energy industry

Thickness measurement of fuel cells and battery film (coated and uncoated)

Material engineering

Thickness measurement of film, plastic plates, woven materials, wood and ceramics

Models

thicknessGAUGE

thicknessGAUGE C.LL

Sensor technology used:
Laser triangulation displacement sensors

- Measuring range (thickness): 6 / 50 mm
- Accuracy: $\pm 1 / \pm 5 \mu\text{m}$
- Measuring rate: up to 10 kHz

For common surfaces from plastic to metal

Compact design meets high performance
& excellent price/performance ratio

thicknessGAUGE C.C

Sensor technology used:
Confocal chromatic displacement sensors

- Measuring range (thickness): 2.5 mm
- Accuracy: $\pm 0.4 \mu\text{m}$
- Measuring rate: up to 10 kHz

For common surfaces as well as
mirroring and shiny objects

High performance: fast and high
resolution

thicknessGAUGE C.LP

Sensor technology used:
Laser profile sensors

- Measuring range (thickness): 15 mm
- Accuracy: $\pm 1.2 \mu\text{m}$
- Measuring rate: up to 100 Hz

For common surfaces as well as for
structured materials such as perforated
plate or embossed plates

Compensation for tilted strips

Powerful analysis and control software

The thicknessGAUGE systems include a multi-touch-capable industrial PC with a comprehensive software package. This allows production data to be displayed, monitored, analyzed and archived. The software offers a wide range of views and measurement modes, such as the display of a fixed-track thickness measurement at any position, a transverse profile view, longitudinal trend display, single value display or measurement chart using false color representation. In addition, individually automatable test equipment capability monitoring and statistical process control (SPC package) are available.

Software features:

- Article database
- Production archive
- Statistical evaluations
- Limit value monitoring with return back to production
- Fieldbus interfaces (optional)
- Verification of gauge/test equipment capability

Size and installation dimensions of the industrial PC with touchscreen

Dimensions in mm, not to scale.

Sensor system for precise thickness measurement (laser triangulation sensors)

thicknessGAUGE C.LL

Sensor technology used:
Laser triangulation displacement sensors

Laser class 2, no special safety
precautions required

Measuring range (thickness) 6 / 50 mm

Accuracy: $\pm 1 / \pm 5 \mu\text{m}$

Measuring rate; up to 10 kHz

For numerous materials, e.g., plastics,
wood and metals

Compact design meets high performance
& excellent price/performance ratio

MR = Measuring range
SMR = Start of measuring range
EMR = End of measuring range
Dimensions in mm, not to scale.
Drawing of industrial PC, see page 5.
