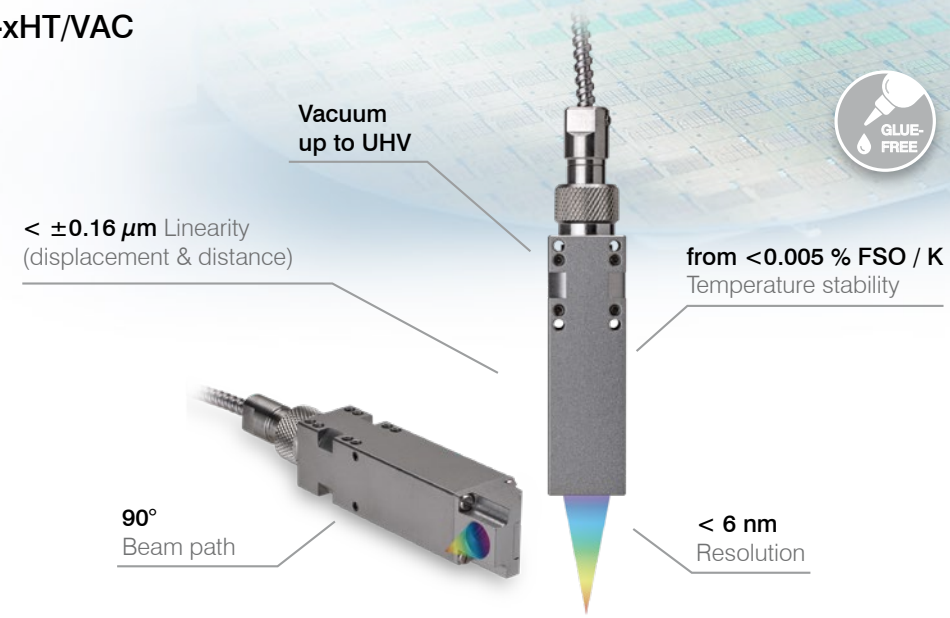
Confocal high temperature sensors for up to 200 °C
confocalDT IFS2407-xHT/VAC

- Robust and compact sensor design
- Submicron resolution
- High temperature up to 200 °C
- Suitable for vacuum applications up to UHV
- For precise distance and thickness measurements



Compact, vacuum-compatible and thermally stable up to 200 °C

The new confocal chromatic sensors set benchmarks for distance and thickness measurements in challenging environments. For the first time, the Micro-Epsilon portfolio includes optical sensors that can withstand temperatures up to 200 °C – with maximum measurement accuracy.

Thanks to their compact design, these sensors are ideal for applications with very limited installation space. The innovative HT models are available in various measuring ranges and with a 90° beam path, and can be flexibly adapted to different installation situations.

By dispensing with organic adhesives, the high-temperature sensors made of stainless steel are low outgassing and therefore ideally suited for use up to ultra-high vacuum (UHV) – the ideal choice for measurement tasks in precision machine building and the semiconductor industry.

Maximum compatibility

All confocalDT sensors are compatible with the IFC controllers. This enables measuring rates up to 30 kHz for fast and reliable process monitoring.

Versatile applications

Versatile designs enable the use in different industries such as the electronics and semiconductor industries, glass industry, medical technology and machine building.

Innovative technology

Their innovative technology enables these sensors to measure reliably even on diffuse and strongly reflective surfaces and under extremely challenging ambient conditions. The passive design of the confocalDT sensors avoids heat radiation into the environment. For vacuum applications, specially developed accessories are available.

Accessories
Mounting adapter for individual sensors

- Manual adjustment mechanism for easy and fast adjustment
- Optimal sensor alignment for best possible measurement results
- Ideally suitable for machine integration

Particularly for high resolution sensors with a small inclination angle, perpendicular installation is required. The JMA-xx mounting adapter enables fine alignment of the sensor to the target via the simple adjustment mechanism. This makes it easy to compensate for minor mounting deviations or tilted measuring objects.

- 1 JMA-xx
- 1 Sensor holder for smaller diameters (not with JMA-27)
- 1 Hexagon screwdriver for positioning
- Setup guide

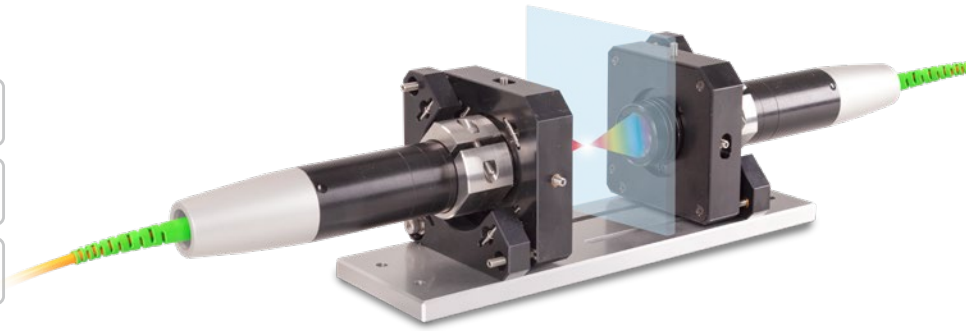
Accessories
Mounting adapter for two-sided thickness measurements

- Optimal alignment of the optical axes enables high precision in two-sided thickness measurements
- Pre-assembled for easy installation and fast commissioning
- Ideally suitable for machine integration



For two-sided thickness measurements, the JMA-Thickness mounting adapter supports the alignment of the measuring points to one another. This means that the measuring points are arranged absolutely congruent to each other so that the sensors are positioned exactly on an optical axis. This prevents measurements at an offset and a reliable measurement result is achieved with the highest possible precision.

When delivered, the two mounting adapters are pre-mounted on a mounting plate and aligned with one another. This simplifies installation and the measuring system can be put into operation more quickly. After installation into the machine, the plate can be removed, if necessary.
